belongs to the generation of new and advanced ASW sonar systems, which comply with today's naval requirements to counter the ASW threat by deploying high-transmission-level low-frequency sonar equipment at variable depth to achieve long-range submarine detection. The Active Towed Array Sonar System ACTAS is designed to support ASW operations against small, silent submarines over long ranges and in difficult sonar environments.

Atas system is a Low and Medium Frequency Active and Passive Variable Depth Sonar designed to comply with the Italian Navy's anti-submarine warfare requirements. The system provides simultaneously: panoramic surveillance in active and passive mode, automatic classification of threats and torpedo alarm. The best trade-off between size, weight and performance makes Whitehead ATAS the first in class towed active sonar for modern shallow waters and blue waters vessels.

active source and passive towed array to achieve a single "short scope" tow. This provides rapid response to ship maneuvers and is effective in the littoral, shallow water environment where other towed arrays are ineffective.

The towed array sonar provided by ATLAS permits observation of the sea space at ranges considerably above 60 kilometres, depending on the propagation conditions of the water. This gives the sonar an operational range that by far exceeds that of radars and the weapons range of submarines. The system is, therefore, not only ideal for hunting submarines but also for the wide-area reconnaissance of surface combatants.

warfare from Germany

A towed array sonar is a system of hydrophones towed behind a submarine or a surface ship on a cable. Trailing the hydrophones behind the vessel, on a cable that can be kilometres long, keeps the array's sensors away from the ship's own noise sources, greatly improving its signal-to-noise ratio, and hence the effectiveness of detecting and tracking faint contacts, such as quiet, low noise ...

Towed array sonar - Wikipedia

NEW DELHI: India will get six low frequency Active Towed Array Sonar (ACTAS) systems, that will be fitted on the Kamorta-class corvettes, later this year from Germany. The system, which can detect enemy submarines, will give a fillip to India's anti-submarine warfare capabilities. India had late last year signed a contract for the towed array sonar with
