Due to the widespread use of antibiotics, there is an emergence of drug-resistant pathogens in many regions. Hence, there is a need to search for novel, cost-effective bioactive compounds that demonstrate high efficacy and low toxicity in human cells from unexplored ecosystems to combat emerging drug-resistant pathogens. Chapters of this volume focus on the pathogenesis and etiology of each of the mentioned diseases, updated WHO reports wherever applicable, conventional drugs and their pharmacokinetics as well as new approaches to develop anti-infective agents. The authors also present a detailed report on "superbugs" (multi-drug resistant pathogens) and new measures being taken up to eradicate them.
