# Breeding Plans For Ruminant Livestock In The Tropics Fao Animal Production And Health Paper

Thank you enormously much for downloading **breeding plans for ruminant livestock in the tropics fao animal production and health paper**. Most likely you have knowledge that, people have look numerous time for their favorite books later than this breeding plans for ruminant livestock in the tropics fao animal production and health paper, but stop going on in harmful downloads.

Rather than enjoying a fine PDF later than a mug of coffee in the afternoon,

# File Type PDF Breeding Plans For Ruminant

otherwise they juggled behind some harmful virus inside their computer.

**breeding plans for ruminant  
livestock in the tropics fao animal  
production and health paper** is

genial in our digital library an online right of entry to it is set as public fittingly you can download it instantly.

Our digital library saves in complex countries, allowing you to acquire the most less latency period to download any of our books behind this one.

Merely said, the breeding plans for ruminant livestock in the tropics fao animal production and health paper is universally compatible behind any devices to read.

Within a few months the animals can  
be milking, or producing progeny for  
breeding or for meat. Naturally if there  
are no or few local cattle (or sheep),  
females must be imported. Females  
must also be imported if the aim is to  
form a nucleus herd. Otherwise there  
are several disadvantages.

The breeding plan given below is based on the description by Meyn and Wilkins (1974) whose schematic diagram is also reproduced in Figure 4.1. The herd consists of about 500 cows. Breeding is by AI with semen from the best two progeny tested bulls. Female selection is almost entirely on milk yield during the first two lactations.

necessary in herd management are simple. In most instances, all that may be necessary is the individual unadjusted production data to aid in determining nutritional requirements and herd summaries. Data processing for genetic improvement, on the other hand, requires a considerable amount of computation.

breeding plans for ruminant livestock in the tropics. In general, livestock in tropical regions are less productive than those in temperate parts of the globe. They are smaller and have lower yields of milk, wool or meat. The question is: Is this difference inevitable because of the climatic differences, or can it be overcome by changing the animals or by changing the way they are cared for?
