The BMTCN Certification Review Manual is an essential resource for RNs preparing to take the blood and marrow transplant certified nurse (BMTCN) examination. As the only nationally accredited test of its kind, the BMTCN certification identifies nurses as being adept in the specialty of blood and marrow transplantation. This study manual is an essential learning resource for your certification preparation.

One of the biggest challenges of evidence-based practice (EBP) is translating knowledge, research, and clinical expertise into action. Failure to execute EBP well is rarely due to a lack of information, understanding, or experience; rather, it comes down to the lack of tools and practicality of implementing EBP into nursing care. Evidence-Based Practice in Action is a unique, application-oriented EBP toolkit that follows the steps of the newly modified Iowa Model Revised: Evidence-Based Practice to Promote Excellence in Health Care. This book offers a detailed plan to guide nurses and healthcare leaders in promoting EBP adoption and implementation. This practical, easy-to-use guide directs healthcare leaders through preparing, implementing, and evaluating EBP and provides tools for topic selection, literature searches, research and evidence review, implementation, and evaluation. The authors provide comprehensive building blocks along with strategies, tools, and tips to guide individuals and teams who make the important day-to-day decisions that ultimately affect patient outcomes. 2nd Place 2018 AJN Book of the Year

An outline-format, inexpensive, paperback review book for undergraduate nursing students that can be used for course or subject review or NCLEX preparation. Contains NCLEX-style review questions in each chapter, a comprehensive exam, and additional questions on a back-of-book CD-ROM. This edition includes new NCLEX-style innovative item questions.

This book presents the current state of the nursing science in topics relevant to the care of pediatric oncology patients and their families across the treatment trajectory and is framed within a precision health framework. The spectrum of topics covered is wide, including, for example, symptom management, self-care management, exercise and physical activity, family-centered care, palliative care, the role of the nurse in treatment decision making, patient and nurse resiliency, survivorship, and genetic counseling. Throughout, there is a focus on the implications of research for nursing practice, highlighting which elements of the available evidence are ready for translation into practice and which are not. In addition, careful attention is paid to the role that nursing can play in further advancing science through clinical research. The authors are leading experts from across the globe. The book will be of special interest for pediatric oncology nurses, including direct care nurses, research nurses, and nursing leaders, and will also be a stimulating source for researchers and non-oncology nurses.
