Math rint method rounds off its argument to the nearest mathematical integer and returns its value as a double type. The nearest integer to -99.4 is -99.0 so that is the output. Math rint method behaves in a particular way at the mid-point i.e. when the decimal part of the argument is 0.5. In such cases, the result is the integer value that is even.

In scientific computation and simulation, the method of fundamental solutions is a technique for solving partial differential equations based on using the fundamental solution as a basis function. The MFS was developed to overcome the major drawbacks in the boundary element method which also uses the fundamental solution to satisfy the governing equation.

Consequently, both the MFS and the BEM are of a boundary discretization numerical technique and reduce the computational complexity by one dim

Method of fundamental solutions - Wikipedia

The present ADM has the capability to produce three different types of solutions, namely, explicit exact solution, analytic solution, and semi-analytic solution. In the best cases, when a closed-form solution exists, ADM is able to capture this exact solution, while most of the numerical methods can only provide an approximation solution.

Direct methods compute the solution to a problem in a finite number of steps. These methods would give the precise answer if they were performed in infinite precision arithmetic. Examples include Gaussian elimination, the QR factorization method for solving systems of linear equations, and the simplex method of linear programming.
