Louis Trimble has been involved for nearly 20 years in the development of English for science and technology (EST), and in this book he describes the approach which he and others have developed. It starts from the premise that in order to understand the written EST found in technical manuals, textbooks, papers etc., it is first necessary to have an understanding of the discourse structure of these texts. Here he gives a very full description, with many examples, of the various significant features of EST discourse, such as types of classification, definition, instruction etc. The book also describes the 'individualising process' whereby students bring their own specialised material into the course; and the last chapter, demonstrates how a particular course can be organised and structured.

Good Style explains the tactics that can be used to write technical material in a coherent, readable style. It discusses in detail the choices of vocabulary, phrasing and sentence structure and each piece of advice is based on evidence of the styles preferred by technical readers and supported by many examples of writing from a variety of technical contexts. John Kirkman draws from his many years of experience lecturing on communication studies in Europe, the USA, the Middle East and Hong Kong, both in academic programmes and in courses for large companies, research centres and government departments. Good Style has become a standard reference book on the shelf of students of science, technology and computing and is an essential aid to all professionals whose work involves writing of reports, papers, guides, manuals or on-screen texts. This new edition also includes information on writing for the web and additional examples of how to express medical and life-science information.
