Ethnobotany Of Religious Practices In Kumaun Havan

In Benin, folk religions are recognized as official religions. Vodoun or Orisha, the most prevalent traditional faith in the country, is based on the belief of supernatural gods that help the creator govern the natural world (Herskovits 1938). A wide variety of ritual plants are sold at Benin's urban markets (Quiroz et al. 2014).

With reference to India.

Plant exudates are described in K'iche' Maya cosmology, Colonial descriptions by 1W Spanish and European chroniclers, and are found in the archaeological record; these issues are discussed. The perceived medicinal and ritual properties of plant resins by the five Maya groups are discussed in detail and collection and processing methods described. Plant resins are critical components of modern Maya medicine and religious beliefs and practices: as fever reducers, wound cleansers, and anti-inflammation agents and as incense and ritual payments in religious rites.

African Ethnobotany in the Americas provides the first comprehensive examination of ethnobotanical knowledge and skills among the African Diaspora in the Americas. Leading scholars on the subject explore the complex relationship between plant use and meaning among the descendants of Africans in the New World. With the aid of archival and field research carried out in North America, South America, and the Caribbean, contributors explore the historical, environmental, and political-ecological factors that facilitated/hindered transatlantic ethnobotanical diffusion; the role of Africans as active agents of plant and plant knowledge transfer during the period of plantation slavery in the Americas; the significance of cultural resistance in refining and redefining plant-based traditions; the principal categories of plant use that resulted; the exchange of knowledge among Amerindian, European and other African peoples; and the changing significance of African-American ethnobotanical traditions in the 21st century. Bolstered by abundant visual content and contributions from renowned experts in the field, African Ethnobotany in the Americas is an invaluable resource for students, scientists, and researchers in the field of ethnobotany and African Diaspora studies.

Ethnobotany deals with traditional and indigenous associations of people with plants. The subject has been attracting more and more scholars in India and many other countries. Its importance in search for new molecules from ethnomedicinal herbs and useful genes from wild relatives and land races of crops, still in use among many native folk, for genetic engineering has enhanced the importance of the discipline. The number of books and research papers published each year has been rapidly increasing. Research workers need to know about the work done on their topic of study. Bibliographies reviews greatly help in this and save their valuable time. About 2500 publications are listed in the present book. To facilitate the search of reference on particular region, ethnic groups or use categories indexes are given for providing clues to such search. Research guides can easily spot gaps in ethnobotanical studies in any ethnic society, as also regions of the country. Biographers will find from one source the work done in single or joint authorship by the scientist on whom they are writing. To facilitate this an index by surname of joint authors is also provided. The book will be an essential reference work for research workers.

The compendium brings together for the first time, complete, up-to-date information on 469 plants of sacred and magico-religious importance from the Indian perspective. Inclusion of 12 appendices and an over 57 colour photographs are the other important features of this compilation. With its comprehensive coverage of the subject, Sacred and Magico-religious Plants of India is a vital reference source for students, teachers, scientific and university libraries, institutions and individuals active in ethnobotanical research and also to all those who are nature worshippers and eager to know more about Indian mythology.

In the mysterious and pristine forests of the tropics, a wealth of ethnobotanical panaceas and shamanic knowledge promises cures for everything from cancer and AIDS to the common cold. To access such miracles, we need only to discover and protect these medicinal treasures before they succumb to the corrosive forces of the modern world. A compelling biocultural story, certainly, and a popular perspective on the lands and peoples of equatorial latitudes—but true? Only in part. In *The Ethnobotany of Eden*, geographer Robert A. Voeks unravels the long lianas of history and occasional strands of truth that gave rise to this irresistible jungle medicine narrative. By exploring the interconnected worlds of anthropology, botany, and geography, Voeks shows that well-intentioned scientists and environmentalists originally crafted the jungle narrative with the primary goal of saving the world's tropical rainforests from destruction. It was a strategy deployed to address a pressing environmental problem, one that appeared at a propitious point in history just as the Western world was taking a more globalized view of environmental issues. And yet, although supported by science and its practitioners, the story was also underpinned by a persuasive mix of myth, sentimentality, and nostalgia for a long-lost tropical Eden. Resurrecting the fascinating history of plant prospecting in the tropics, from the colonial era to the present day, *The Ethnobotany of Eden* rewrites with modern science the degradation narrative we've built up around tropical forests, revealing the entangled origins of our fables of forest cures.

More than 2000 species of vascular plants play a vital role directly or indirectly in the economy of state and subsistence of about 42 lakhs population of tribals. In this book 610 species have been dealt which are used by the tribals for food, fodder, timber, fire-wood, tannin, dye, oil, fibre, medicine, alcohol, gum and resin etc. Besides above, the plants which find place in totems and taboos, magico-religious beliefs, magico-medicines, rites and rituals and several ceremonies and household uses related to the life of tribals from birth to death have also been discussed under the species arranged alphabetically. The correct botanical name of each species is followed by the prevalent local names, short diagnostic characters, habitat and distribution in the state and flowering and fruiting period before dealing with the above mentioned uses. The plants which find place in folk songs, proverbs, musical instruments and considered auspicious or inauspicious or landmark for routes etc have been discussed under separate heads in the end of the book. The introductory chapters include detailed information about land environment of the state, the tribal populations — their culture and customs, previous ethnobotanical works and methodology of present study. Besides 67 figures of individual plants, 62 coloured and one black and white photographs reflecting landscape, vegetation types, individual plants, culture and custom of tribals and plant-based household and agricultural implements have been included. The authors would welcome any suggestion from its readers that may be valuable in the future improvement of this book

Ethnobotany: Local Knowledge and Traditions discusses various plants that have actually been used in traditional medicine for a specific ailment. It describes the biological effectiveness (activities) related to each "sickness" which have been scientifically verified. This book will also discuss the bioactivities established/determined that are promising and have potential. Finally, this book will be an appropriate consultation tool for scientists/professionals/experts such as ethnobotanists, botanists, cell/molecular biologists, chemists, pharmacists, pharmacologists, environmentalists/ecologists.

Cannabis: Evolution and Ethnobotany is a comprehensive, interdisciplinary exploration of the natural origins and early evolution of this famous plant, highlighting its historic role in the development of human societies. Cannabis has long been prized for the strong and durable fiber in its stalks, its edible and oil-rich seeds, and the psychoactive and medicinal compounds produced by its female flowers. The culturally valuable and often irreplaceable goods derived from cannabis deeply influenced the commercial, medical, ritual, and religious practices of cultures throughout the ages, and human desire for these commodities directed the evolution of the plant toward its contemporary varieties. As interest in cannabis grows and public debate over its many uses rises, this book will help us understand why humanity continues to rely on this plant and adapts it to suit our needs.
