You've discovered that you or someone you care about is pregnant. After that initial rush of excitement, you start to have a lot of questions. Is the baby healthy? Is he or she growing well? From the moment a woman suspects that she is pregnant, the testing begins, and so do the questions. Can she trust the home pregnancy test kits? When is it time to go to the doctor or midwife? After coming to terms with the fact that pregnancy has occurred, the next step is often to worry about whether everything is progressing normally. With this book, expectant parents will find a clear timeline and explanation of all the tests they can expect to receive at each stage of pregnancy, as well as how and why they are performed, and the risks involved. This book clarifies the pros and cons of each type of test, enabling parents to choose the testing options with which they are most comfortable. It does this in a positive, factual way so as not to exacerbate fears or implant worries in parents' minds of all the worst-case scenarios. Prenatal Tests and Ultrasound: The Facts is an invaluable source of information for expectant parents and their friends and families, and will also be of interest to professionals in general practice, obstetrics and gynaecology, and midwifery.

A Year in the (Infertility) Life By: Nikki Zurawski Infertility. It usually takes a year or more of "trying" to get pregnant to get to that word, and no one wants to hear it. Once the doctor says it out loud, life can change as you know it. Poking and prodding. Early morning appointments. Ovulation tracking. HSG dye tests. Ultrasounds. Expensive Consultations. Fertility drugs that you can't even pronounce. Painful procedures. Fertility clinic referrals. Treatment cycles. Intrauterine insemination. Polypectomy. Too many follicles. Cysts. Injections. Hormone Support. Surgeries. Consultations on in-vitro fertilization. Even loss. That's just the physical side of it. The emotional side? Trying to navigate rescheduling work meetings for last-minute appointments based on baseline data each cycle. Tough conversations with friends, family, and your boss. Deciding when to allow your body a "break" from treatment cycles, even if just to give your health savings account a chance to catch up. Overthinking. Sleepless nights. Worrying that in the end, none of it will work. Trying to find a way to stay sane in the midst of all of it while literally filling your body with hormones.
