Slow Cities: Conquering Our Speed Addiction for Health and Sustainability demonstrates, counterintuitively, that reducing the speed of travel within cities saves time for residents and creates more sustainable, liveable, prosperous and healthy environments. This book examines the ways individuals and societies became dependent on

transport modes that required investment in speed. Using research from multiple disciplinary perspectives, the book demonstrates ways in which human, economic and environmental health are improved with a slowing of city transport. It identifies effective methods, strategies and policies for decreasing the speed of motorised traffic and encouraging a modal shift to walking, cycling and public transport. This book also offers a holistic assessment of the impact of speed on daily behaviours and life choices, and shows how a move to slow down will

transport in cities throughout the world, and a list of references including both academic sources and valuable websites

Encouraging more people to cycle is increasingly being seen as a vital part of any local authority plan to tackle congestion, improve air quality, promote physical activity and improve accessibility. This design guide brings together and updates guidance previously available in a number of draft Local Transport Notes and other documents. Although the focus is the design of cycle infrastructure, parts of its

advice are equally appropriate to improving conditions for pedestrians. Individual chapters cover: general design parameters; signing issues; network management; reducing vehicle speeds on cycle routes; bus and tram routes; cycle lanes; off-road cycle routes; junctions; cycle track crossings; cycle parking; public transport integration. A list of references and an appendix of related publications complete the book. It is hoped that, by bringing together relevant advice in a single document, this guide will make it easier for local authorities to

This collection deals with the impacts of climate change, focusing on urban regions and heritage-related scenarios. It assesses the effects of climate change on our cultural and natural heritage, disaster management, adaptation to climate change, and sustainability in building and urban planning. Climate change concerns our cultural and natural heritage, so it is crucial that we address this issue with regard to all of its social, physical

and cultural consequences. Far-reaching actions are needed to adapt the natural and historic environment to make it more resilient to climate change and to limit further damage.

Designing for Cycle Traffic compares and evaluates international principles and practices for designing for cycle traffic. It is essential reading for designers and planners in traffic and highway engineering, transport planning, and urban design.

This book examines emerging debates and questions around cycling to critically analyse and challenge dominant framings and prevalent conventions of 'good cycling'. Cycling Societies brings to light the plurality of voices and forms of cycling in other societies, revealing the diversity and complexity of cycling across different socio-political regimes, geographies and cultures. It presents case studies from five continents and demonstrates the need of thinking comparatively about cycling and urban environments. The book pivots around the three

themes of innovations, inequalities and governance and engages a diversity of voices: world-renowned academics in the field of cycling and urban mobility, cycling activists and transportation consultants. Synthesising academic contributions with policy briefs, this innovative book will be of great interest to students, scholars and practitioners of sustainable transportation, urban planning and mobility studies.

is a critical review of how the design dimension of the Urban Renaissance strategy was developed and applied, based on expert academic assessments of progress in Britain's thirteen largest cities. The case studies are preceded by a dissection of New Labour's renaissance agenda, and concluded by a synthesis of achievements and failings. Exploring the implications of this strategy for the future of urban planning and design, this is a must-read for students, practitioners of these subjects and for all those who wish to improve the quality of the British urban environment.

This book provides a critical overview of the relationships between planning and railway management and development during the key period in the 20th Century when the railway was in public ownership: 1948-94. It assesses the strength of the relationships when working in collaboration with the private sector. The book then focuses on the interplay between planning and railway since privatization in 1994 and points to best practice for the future in institutional structures and policy development to secure
