OpenOffice Spreadsheet Beginners Tutorial

Version Apache OpenOffice 4.1.7 Apache OpenOffice has several components (Writer, Calc, Impress, Draw, Base...) that share many characteristics on their user interfaces. For this reason the present guide will start to talk about Apache OpenOffice as a whole, then later provide "examples" for each component.

Scenarios are a tool to test "what-if" questions. Each scenario is named, and can be edited and formatted separately. When you print the spreadsheet, only the contents of the currently active scenario is printed. A scenario is essentially a saved set of cell values for your calculations.

What is Calc? Calc is the spreadsheet component of OpenOffice.org (OOo). You can enter (usually numerical) data in a spreadsheet and then manipulate this data to produce certain results. Alternatively, you can enter data and then use Calc in a 'What if...' manner by changing some of the data and observing the results

Calc Guides | LibreOffice Documentation - Your ...

The Apache OpenOffice User Forum is an user to user help and discussion forum for exchanging information and tips with other users of Apache OpenOffice, the open source office suite.

Uses the straightforward For Dummies style to show Linux and Windows users how to use the OpenOffice.org desktop productivity suite. OpenOffice.org has a user interface and feature set similar to that of other office suites and works transparently with a variety of file formats, including those of Microsoft Office. Explains how to download, install, and set up both the Linux and Windows versions of OpenOffice.org. Organized by the four key desktop applications provided in the OpenOffice.org suite: Writer (word processing), Calc (spreadsheets), Impress (presentations), and Draw (graphics). Other topics covered include creating and formatting documents with Writer, using templates and styles, creating spreadsheets with Calc, manipulating spreadsheet data, creating a presentation with Impress, and creating and editing images with Draw.

This book is an extract from a much larger book entitled *Designing with LibreOffice*. It is intended for those who only want information on using styles and templates with LibreOffice, the popular free-licensed office suite. It consists of Chapters 2, 3 and 11 in the larger book. This book is the first of five extracts from the complete book. The extracts are: Part 1: Styles and Templates, Part 2: Choosing Fonts, Part 3: Character and Paragraph Styles, Part 4: Page, Frame, and List Styles, Part 5: Slide Shows, Diagrams, and Spreadsheets. Together, the five smaller books will contain most, but not all, of the information from the larger book. Any changes are minimal, and made for continuity or changes in structure made necessary by the changes in format.

This book provides an introduction to the creation and management of macros in OpenOffice. Numerous examples and explanations demonstrate proper techniques and discuss known problems and solutions. The underlying data structure is discussed and techniques are introduced to evaluate OpenOffice objects, facilitating the use of returned objects in the absence of sufficient documentation.
