The researchers surveyed the southern Gulf of Mexico, an area that had been home to the Ixtoc 1 well, which suffered a blowout and massive oil spill in 1979. Along with measuring the typical distribution of elements, the study looked for evidence of oil within the sediment that could have come from that spill, but they didn ’ t find any signs of that disturbance remaining.

The amount of carbon dioxide in the atmosphere has increased 40 percent since the Industrial Revolution (1760 to 1840) because of human activities. The ocean, including the Gulf of Mexico, has absorbed at least 25 percent of this carbon dioxide, which will almost certainly continue to increase, resulting in harmful conditions to marine life, according to a study co-authored by a team of Texas A&M University Department of Oceanography professors.

~~Oceanography Study Says Carbon Dioxide Levels Rising In ...~~

Gulf of Mexico, Spanish Golfo de México, partially landlocked body of water on the southeastern periphery of the North American continent. It is connected to the Atlantic Ocean by the Straits of Florida, running between the peninsula of Florida and the island of Cuba, and to the Caribbean Sea by the Yucatán Channel, which runs between the Yucatán Peninsula and Cuba.
