Mechanical power is the product of force and velocity so  $P = Fv$  (Watts). In this case we have one force pulling in opposition to the other so the net power transmitted is  $P = v(F_1 - F_2)$  Since  $v = ND$   $P = ND(F_1 - F_2)$  Another way to look at this follows. Torque = Force x Radius and since radius is half the diameter  $T = F \times D/2$
