Edmund Husserl (1859–1938), a philosopher, established the discipline of phenomenology. In Husserl ' s approach to phenomenology, now labelled descriptive phenomenology, experiences are described and researcher perceptions are set aside or ' bracketed ' in order to enter into the life world of the research participant without any presuppositions. 1 Experience is recognised to involve perception, thought, memory, imagination and emotion, each involving ' intentionality ' , as the ...

Conducting phenomenological research for dissertations can be an involved and challenging process, and writing it up is often the most challenging part. *How to Write a Phenomenological Dissertation* gives students practical, applied advice on how to structure and develop each chapter of the dissertation specifically for phenomenological research. Phenomenology is about personal experience and personal experience varies from researcher to researcher. However, this variation is a big source of confusion for new researchers in the social, behavioral, or health sciences. This brief text is written in a simple, step-by-step fashion to account for this flexibility and variation while also providing structure necessary for a successful dissertation. Broken up into chapters that follow each chapter of the dissertation, this text logically addresses the various parts of phenomenological research, starting with ensuring phenomenology is the right method for your research, writing the literature review, going through methods and results sections to analysis and discussion. The author, using experience gleaned from supervising phenomenological dissertations for many years, gives time-tested advice on how structure the dissertation to fit into more common frameworks, using checklists and tables throughout. Each chapter includes a list of helpful resources for students to use alongside this book with specific information on methods and research. Unique to this text is a chapter on creating your own phenomenological method which allows students to expand their viewpoints and experiment in future studies after the dissertation.

Max van Manen offers an extensive exploration of phenomenological traditions and methods for the human sciences. It is his first comprehensive statement of phenomenological thought and research in over a decade. Phenomenology of practice refers to the meaning and practice of phenomenology in professional contexts such as psychology, education, and health care, as well as to the practice of phenomenological methods in contexts of everyday living. Van Manen presents a detailed description of key phenomenological ideas as they have evolved over the past century; he then thoughtfully works through the methodological issues of phenomenological reflection, empirical methods, and writing that a phenomenology of practice offers to the researcher. Van Manen's comprehensive work will be of great interest to all concerned with the interrelationship between being and acting in human sciences research and in everyday life. This is an accessible, concise introduction to phenomenological research in education and social sciences. Mark Vagle outlines the key principles for conducting this research from leading contemporary practitioners, such as van Manen, Giorgi, and Dahlberg. He builds on their work by introducing his post-intentional phenomenology, which incorporates elements of post-structural thinking into traditional methods. Vagle provides readers with methodological tools to build their own phenomenological study, addressing such issues as data gathering, validity, and writing. Replete with exercises for students, case studies, resources for further research, and examples of completed phenomenological studies, this brief book affords the instructor an easy entrée into introducing phenomenology into courses on qualitative research, social theory, or educational research.

Methodology breaks down the history, methodology, and application so students can more easily write proposals and conduct phenomenological research. Author Cheryl Tatano Beck draws on her depth of experience in applying and teaching phenomenological methods to distill the method into a single guidebook for students and new researchers alike. This introductory book provides a clearer picture of phenomenology as method and its applications to social, behavioral, and health sciences, covering both interpretive and descriptive phenomenology from research design through analysis. This book is divided into four parts. Part I briefly provides the philosophical underpinnings of descriptive and interpretive (hermeneutic) phenomenology, summarizing the main goals of the original texts. Part II focuses on descriptive phenomenology, while Part III concentrates on interpretive phenomenology. Each type of methodology is covered in its own chapter, with tables comparing the methodologies to one another so readers can better understand the differences and similarities. Part IV addresses evaluating, writing, and teaching phenomenology. Unique chapters on writing a proposal, getting your study published, developing a research program, and preparing to teach phenomenology help complete the cycle of research and help graduate students transition from student to researcher to teacher. Appendices provide study activities for students and examples of two types of phenomenological proposals.

'It is not often I can use "accessible" and "phenomenology" in the same sentence, but reading the new book, Interpretative Phenomenological Analysis...certainly provides me the occasion to do so. I can say this because these authors provide an engaging and clear introduction to a relatively new analytical approach' - The Weekly Qualitative Report Interpretative phenomenological analysis (IPA) is an increasingly popular approach to qualitative inquiry. This handy text covers its theoretical foundations and provides a detailed guide to conducting IPA research. Extended worked examples from the authors' own studies in health, sexuality, psychological distress and identity illustrate the breadth and depth of IPA research. Each of the chapters also offers a guide to other good exemplars of IPA research in the designated area. The final section of the book considers how IPA connects with other contemporary qualitative approaches like discourse and narrative analysis and how it addresses issues to do with validity. The book is written in an accessible style and will be extremely useful to students and researchers in psychology and related disciplines in the health and social sciences.

Bestselling author Max van Manen 's *Researching Lived Experience* introduces a human science approach to research methodology in education and related fields. The book takes as its starting point the "everyday lived experience" of human beings in educational situations. Rather than rely on abstract generalizations and theories in the traditional sense, the author offers an alternative that taps the unique nature of each human situation. First published in 1990, this book is a classic of social science methodology and phenomenological research, selling tens of thousands of copies over the past quarter century. Left Coast is making available the second edition of this work, never before released outside Canada. *Researching Lived Experience* offers detailed methodological explications and practical examples of inquiry. It shows how to orient oneself to human experience in education and how to construct a textual question which evokes a fundamental sense of wonder, and it provides a broad and systematic set of approaches for gaining experiential material which forms the basis for textual reflections. The author: -Discusses the part played by language in educational research-Pays special attention to the methodological function of anecdotal narrative in research-Offers approaches to structuring the research text in relation to the particular kinds of questions being studied
