Shields' Textbook of Glaucoma: India Edition: Amazon.co.uk ...

Shields' Textbook of Glaucoma was first published in 1982 as a conventional textbook with Bruce Shields as its sole author. This is the sixth edition. It continues the tradition of the earlier editions and meets the challenges of the modern era in a text that is authoritative, clinically relevant and, best of all, in a clearly expressed form.

Thoroughly updated, and now in full color, Shields' Textbook of Glaucoma, Sixth Edition is a clinically focused and practical textbook for general ophthalmologists treating patients with glaucoma. This classic text offers a rational approach to the medical and surgical management of glaucoma and presents a total care plan for the patient. This edition has five new or reconfigured chapters—management of the glaucoma patient/approach to the patient; principles of medical therapy; adrenergic agonists and antagonists; cholinergic stimulators and hyperosmotic agents; and neuroprotection and other investigational drugs. The book examines new technologies for intraocular pressure assessment and current diagnostic technologies such as optical coherence tomography, spectral domain optical coherence tomography, Heidelberg retinal tomograph, and GDx. Noted experts detail advances in surgical treatment of glaucoma including new glaucoma implants and angle surgery. Coverage also includes advances in genetics of glaucomatous diseases. A companion website includes the fully searchable text and an image bank.

Known for its consistent, authoritative content and presentation, Shields Textbook of Glaucoma is the premier succinct and clinically focused text on the medical and surgical management of glaucoma. This full-color, easy-to-use reference offers a

rational approach to every aspect of the field, including rare glaucomas, and presents a total care plan for the patient. The seventh edition brings you fully up to date with all that 's new in this rapidly changing field with new chapters, newly colorized line drawings, and an updated design for faster reference.

Known for its consistent, authoritative content and presentation, Shields Textbook of Glaucoma is the premier succinct and clinically focused text on the medical and surgical management of glaucoma. This full-color, easy-to-use reference offers a rational approach to every aspect of the field, including rare glaucomas, and presents a total care plan for the patient. The seventh edition brings you fully up to date with all that's new in this rapidly changing field with new chapters, newly colorized line drawings, and an updated design for faster reference. Presents clear, concise, highly illustrated information ideal for general ophthalmologists, residents, and other non-specialists who treat patients with glaucoma. Includes new chapters on imaging; surgical management, including minimally invasive procedures such as micro-invasive glaucoma surgery (MIGS); sustained drug delivery; and malignant glaucoma/aqueous misdirection. Contains new images, newly colorized line drawings, and new icons that highlight and differentiate procedures for quick reference. Covers advances in genetics, technology, and surgical treatment that impact your management and treatment decisions. Offers expert information that is easy to find, clearly explained, and helpfully illustrated--all from an experienced team of authors who present a balanced, consistent approach throughout. Enrich Your Ebook Reading Experience Read directly on your preferred device(s), such as computer, tablet, or smartphone. Easily convert to audiobook, powering your content with natural language text-to-speech.

The purpose of this important new book is to provide basic scientists working in the field of glaucoma with a current understanding of the clinical aspects of glaucoma. The authors comprehensively review the most current knowledge available in the field and provide a basis in which researchers can effectively study the glaucomas. The multidisciplinary book will be of great value as its contents will aid the reader in prevention of blindness from glaucoma.

With Contributions From Chelvin Sng (National University Health System, Singapore) & Laurence Lim (Singapore National Eye Centre, Singapore) Many new treatments and diagnostic procedures in ophthalmology have been refined or newly developed during the past four years, a new edition reflecting these changes is most timely. The scope and aim of the book will be consistent with the first edition, which provides a broad review of the specialist ophthalmology examinations for final year ophthalmology residents and trainees. The book deals primarily with key facts and topics that are important from the examination perspective. Only information and facts that are considered relevant and critical to the exams are covered, with topics that may be of scientific interest, but are not commonly tested in exams, specifically left out. Time-challenged readers will also benefit from the knowledge acquired from various other sources or textbooks that are now organized and synthesized in this book. While not meant to replace the standard textbooks, enough information is contained within the book to serve as the main revision text nearer the exams. The style and format of this book is intentionally didactic, with questions and short answers. The answer includes a " model opening statement, " followed first by a classification system to aid organization of

facts, and then the core explanation in concise short notes. “ Exam Tips ” are inserted to provide an insight into techniques of answering different types of questions and when appropriate, a “ Clinical Approach ” section is also included. In the new edition, topics such as new understanding of disease mechanisms (e.g., genetics of eye diseases), new investigations (e.g., OCT), and novel procedures and treatment (e.g., the use of antivascular endothelial growth factors, new refractive surgical techniques) are covered. This book will be a valuable guide to the final year ophthalmology residents and trainees taking the specialist ophthalmology examinations, particularly for exams with a strong oral or viva component. Although primarily aimed at candidates attempting the British postgraduate exams (FRCS, FRANZCO, MRCS, MRCOphth and FRCOphth), it is also useful for other examination systems (e.g., the American Boards). Many junior residents, in fact, find the information handy during grand rounds.

Effective care of the cancer patient increasingly involves systemic treatment, and as the range of available therapeutic agents continues to expand, the medical oncologist must be fully aware of the rationale for choosing specific drugs and combinations. Textbook of Medical Oncology, 4th edition, is written by a highly acclaimed list of international authors and is a key source of reference for all working in the field of oncology.

Concise, authoritative, and easy to navigate, The Duke Manual of Glaucoma Surgery offers a step-by-step, highly illustrated approach to the most commonly performed glaucoma surgeries and procedures. Ideal for glaucoma specialists, ophthalmic surgeons, residents, and fellows, it contains practical guidance from Drs. Divakar Gupta, Leon Herndon, Kelly Muir, as well as other experts at Duke University, making it an unparalleled “ how-to ” manual for the wide variety of cases and operative scenarios you may encounter.

Complete evidence-based medical and surgical management of glaucoma for both the general ophthalmologist in practice and residents The only book that covers the new generation of glaucoma procedures including trabectome, trabecular bypass and canaloplasty, by the experts who developed them Includes the latest laser treatments for glaucoma including micro diode and titanium sapphire trabeculoplasty as well as laser from an external approach The most comprehensive coverage of the optic nerve and the importance of nerve fiber layer hemorrhage Provides an integrated approach to neovascular glaucoma merging treatment to the retina, with the use of new anti-VEGF drugs, tubes, and shunts to achieve the best outcome Integrates clinical science with basic science to outline the next steps in glaucoma therapy
