"Scientific discoveries often build on - and are inspired by - previous discoveries. If the scientific enterprise were a tower of blocks, each piece representing a scientific finding, scientific progress might entail making the tower bigger and better block by block, discovery by discovery. Rather than strong wooden blocks, imagine the blocks, or scientific findings, can

take on shape based on scientific accuracy. The most accurate pieces are the strongest and sturdiest, while the least accurate are soft and pliable. Building a tower of the scientific enterprise with a large number of inaccurate blocks will cause the tower to start to wobble, lean over, and potentially collapse, as more and more blocks are placed upon weak and faulty pieces"--

This handbook provides a broad overview of the field of social psychology and up-to-date coverage of current social psychological topics. It reflects the recent and substantial development of the field, both with regard to theory and empirical research. It starts out by covering major theoretical perspectives, including the inter actionist, identity, social exchange, social structure and the person perspectives. Next, it discusses development and socialization in childhood, adolescence and adulthood. In addition to updated discussions of topics that were included in the first edition, the part examining personal processes includes entirely new topics, such as social psychology and the body and individual agency and social motivation. Interpersonal processes are discussed from a contemporary perspective with a focus on stress and health. The final section examines the person in sociocultural context and includes another topic new to the second edition, the social psychology of race and gender and intersectionality.

Actors Michelle Pfeiffer, Glenn Close, Rose McGowan and Leah Remini. Humorist Garrison Keillor. Musician Lisa Marie Presley. WikiLeaks founder Julian Assange. Each of these well-know people has more than fame in common; each was born or raised in a cult. We think of cults as bizarre, inexplicable, or otherworldly places that only strange people inhabit, but cults and other abusive and high-demand groups (and relationships) are actually quite commonplace. In fact, the behaviors, social pressures, and authoritarian structures that create cults exist to a greater or lesser extent in every human relationship and every human group. Cult behavior is human behavior – and by studying cults, we can learn remarkably useful things about the social world and our place in it In the first in-depth research of its kind, sociologist and cult expert Janja Lalich interviewed sixty-five people who were born in or grew

up in thirty-nine different cultic groups spanning more than a dozen countries. What's especially interesting about these individuals is that they each left the cult on their own, without outside help or internal support. In *Escaping Utopia: Growing Up in a Cult, Getting Out, and Starting Over*, Lalach and award-winning author (and fellow cult survivor) Karla McLaren craft Lalach's original and groundbreaking research into an accessible and engaging book, the first of its kind focusing on this particular population. Lalach and McLaren explore fundamental questions about human nature, human development, group dynamics, abuse and control, and triumphs of the human spirit in the face of intense and extended suffering.
