In control engineering, a
state-space

representation is a
mathematical model of a
physical system as a set
of input, output and
state variables related by

Equations or difference equations. State variables are variables whose values evolve over time in a way that depends on the values they have at any given time and on the externally imposed values of input variables.

In state-determined systems, the state variables may always be taken as the outputs of integrator blocks. A system of order n has n integrators in its block diagram.
